DANAI GEORGIA TOPOUZA

PERSONAL STATEMENT

I am a second year MSc student in the Department of Biomedical and Molecular Sciences at Queen's University.

My research interest is in studying complex human diseases using bioinformatics and data mining approaches, in order to uncover disease mechanisms and assist in drug target discovery.

My current work investigates the chemotherapy response in ovarian cancer patients through RNA-seq data analysis. My aim is to identify gene expression networks, miRNA networks, and genomic variants that are associated with a poor chemotherapy response. I expect that these results will highlight the underlying chemotherapy resistance pathways, and provide new targets for patient screening and pharmaceutical applications.

My practical skills include:

Programming languages:	R, Python, Matlab, bash shell scripting (Linux) C, Haskell, Prolog
Bioinformatics:	Next-generation sequencing and microarray data preprocessing and analysis tools, bioinformatics databases; molecular dynamics software
Machine learning skills:	classification, clustering, prediction algorithms
